ALBERTA  
MUNICIPAL AFFAIRS  

---

*Office of the Minister*  
*MLA, Lac La Biche - St. Paul*

MINISTERIAL ORDER NO. L:228/09

I, Ray Danyluk, Minister of Municipal Affairs, pursuant to Sections 322 and 322.1 of the *Municipal Government Act* and the applicable regulations, make the following order:

- The 2009 Alberta Farm Land Assessment Minister's Guidelines,
- The 2009 Alberta Linear Property Assessment Minister's Guidelines,
- The 2009 Alberta Machinery and Equipment Assessment Minister's Guidelines,
- The 2009 Alberta Railway Property Assessment Minister's Guidelines, and
- The 2005 Alberta Construction Cost Reporting Guide

as set out in the attached document, are established and become effective for the 2009 assessment year for taxation in 2010 and subsequent years.

This Ministerial Order rescinds Ministerial Order No. L:249/08 as of December 31, 2009.

Dated at Edmonton, Alberta, this 16<sup>th</sup> day of December, 2009.

---

Ray Danyluk  
Minister of Municipal Affairs

## 1.000 APPLICATION

Pursuant to section 8 of the Regulation, the assessor designated by the Minister must follow the procedures set out in the *2009 Alberta Linear Property Assessment Minister's Guidelines*.

### 1.001 DEFINITIONS

In the *2009 Alberta Linear Property Assessment Minister's Guidelines*

- (a) **Act** means the *Municipal Government Act* (RSA 2000 Ch. M-26);
- (b) **assessment classification code (ACC)** means the components of linear property as determined by the *2009 Alberta Linear Property Assessment Minister's Guidelines*;
- (c) **assessment year** has the meaning given to it in the regulation;
- (d) **assessment year modifier (AYM)** means the factor that adjusts the base cost of the linear property to the assessment year cost;
- (e) **assessor** has the meaning given to it in the *Act*;
- (f) **AUC** means the Alberta Utilities Commission;
- (g) **base cost** means the value resulting from the formula shown in Schedule A of the *2009 Alberta Linear Property Assessment Minister's Guidelines*;
- (h) **Construction Cost Reporting Guide (CCRG)** refers to the 2005 Alberta Construction Cost Reporting Guide;
- (i) **cost factor (cf)** means the factor that adjusts included cost (ic) from the year built to the base cost;
- (j) **depreciation** is the Schedule C factor as determined from the *2009 Alberta Linear Property Assessment Minister's Guidelines*;
- (k) **additional depreciation** is the Schedule D factor as determined from the *2009 Alberta Linear Property Assessment Minister's Guidelines*;
- (l) **electric power systems** has the meaning given to it in the *Act* section 284(1)(k)(i) and (i.1);
- (m) **ERCB** means the Energy Resources Conservation Board;
- (n) **EUB** means the Alberta Energy and Utilities Board;
- (o) **included cost (ic)** means the value of linear property calculated in accordance with the *2005 Construction Cost Reporting Guide*, prior to adjustment by the **cost factor**;
- (p) **linear property** has the meaning given to it in the *Act* section 284(1)(k);
- (q) **Minister** has the meaning given to it in the *Act*;
- (r) **municipality** has the meaning given to it in the *Act*;
- (s) **NEB** means the National Energy Board;
- (t) **operator** has the meaning given to it in the *Act* section 284(1)(p);
- (u) **pipelines** has the meaning given to it in the *Act* section 284(1)(k)(iii);
- (v) **Regulation** means the *Matters Relating to Assessment and Taxation Regulation* (AR 220/2004), as amended;
- (w) **request for information (RFI)** means the report referred to in section 292(3), and the information requested by the assessor pursuant to sections 294(1) and 295(1) of the *Act*;
- (x) **telecommunications systems** has the meaning given to it in the *Act* section 284(1)(k)(ii);
- (y) **year built** is the year in which the linear property meets the conditions in section 291(2)(a) of the *Act*.

**1.002 PROCESS FOR CALCULATING LINEAR PROPERTY ASSESSMENTS**

- (a) Pursuant to section 8(2) of the Regulation, the process for calculating electric power systems linear property assessments is found in section 2.000 of the *2009 Alberta Linear Property Assessment Minister's Guidelines*.
- (b) Pursuant to section 8(2) of the Regulation, the process for calculating telecommunications systems linear property assessments is found in section 3.000 of the *2009 Alberta Linear Property Assessment Minister's Guidelines*.
- (c) Pursuant to section 8(2) of the Regulation, the process for calculating pipeline and well linear property assessments is found in section 4.000 of the *2009 Alberta Linear Property Assessment Minister's Guidelines*.

**1.003 DESCRIPTION OF THE SCHEDULES**

- (a) **Schedule A**—provides the process for determining base cost. Schedule A values are rounded to the nearest \$1 and have a minimum base cost of \$1.
- (b) **Schedule B**—lists the assessment year modifiers. Schedule B factors are specified to three significant digits.
- (c) **Schedule C**—provides the process for determining depreciation or lists the depreciation factor allowed by the *2009 Alberta Linear Property Assessment Minister's Guidelines*. Schedule C factors are specified to three significant digits. **The depreciation factors prescribed in Schedule C for linear property are exhaustive except as specified in Schedule D**
- (d) **Schedule D**—provides the process for determining additional depreciation or lists the additional depreciation factor allowed by the *2009 Alberta Linear Property Assessment Minister's Guidelines*. Schedule D factors are specified to three significant digits. **The additional depreciation factor for linear property described in Schedule D is exhaustive. No additional depreciation is allowed.**

**1.004 ROUNDING**

The final assessment for linear property is rounded to the nearest \$10. The minimum assessment for linear property is \$10.

**1.005 MINISTERIAL PRESCRIPTION**

For the purposes of these Guidelines, it is hereby prescribed that the cost of all computer software, including both basic software and applications software, intended for or used in connection with the monitoring, control or operation of any linear property shall be included in the base cost of the property.

**TABLE 1.01 ASSESSMENT YEAR MODIFIERS (AYM)**

<b>Schedule B</b>					
<b>Year</b>	<b>Electric Power</b>	<b>Cable Distribution Undertakings</b>	<b>Telecommunication Carriers</b>	<b>Pipeline</b>	<b>Wells</b>
<b>2006</b>	1.122	1.002	1.042	1.131	1.164
<b>2007</b>	1.273	0.992	1.058	1.161	1.177
<b>2008</b>	1.325	0.988	1.076	1.255	1.267
<b>2009</b>	1.280	1.076	1.106	1.155	1.185

## 2.000 ELECTRIC POWER SYSTEMS

### 2.001 DEFINITIONS

In section 2.000, the following definitions apply:

- (a) **chronological age** is the assessment year minus the year built or the assessment year minus the effective year built.
- (b) **effective year built** refers to the estimated vintage of generation plant and substation components (and no other property types), based on their present condition, design features and engineering factors.
- (c) **urban** refers to a City, Town, Village and Summer Village as defined in the *Municipal Government Act* and the Sherwood Park Urban Service Area; the Fort McMurray Urban Service Area; and the Municipality of Jasper.
- (d) **rural** refers to all other jurisdictions not referred to in (c).

### 2.002 DESCRIPTION OF THE RATES FOR ASSESSMENT CLASSIFICATION CODES (ACCS) FOUND IN TABLE 2.01

- (a) The rates for Assessment Classification Codes (ACCs) beginning with EDS are comprised of all included costs of components necessary for the distribution of electric power.
- (b) The Assessment Year Modifier (AYM) referred to in Table 2.01 is found in Table 1.01.
- (c) The rates for ESL are comprised of all included costs of components necessary for a typical street lighting service.
- (d) The rates for ACCs beginning with EFS are comprised of all included costs of components necessary for a typical oil and gas field service.
- (e) The rates for ACCs beginning with ET are comprised of all included costs of components necessary for the transmission of electric power.
- (f) The rates for ACCs ET80 and ET90 include the cost of ducting and manholes to protect the linear property.

### 2.003 DEPRECIATION (SCHEDULE D FACTORS) FOR ACCS BEGINNING WITH GEN

- (a) The Schedule C depreciation tables for ACCs beginning with GEN reflect all physical, all functional, all economic and net salvage considerations that form part of EUB decision U97-065 supported by EUB decision U99-099.
- (b) Schedule D depreciation for ACCs beginning with GEN is only allowed for circumstances not considered in Schedule C on a case by case basis when acceptable evidence is documented and provided to the assessor. Schedule D depreciation is limited to highly unusual site-specific circumstances such as catastrophic failure.

### 2.004 PROCESS FOR CALCULATING THE ASSESSMENT OF LINEAR PROPERTY ELECTRIC POWER SYSTEMS

The assessment of linear property electric power systems is calculated by using the following process:

- (a) Locate the ACC determined from section 2.004 in Table 2.01.
- (b) Calculate the base cost using the prescribed Schedule A formula, rounded to the nearest \$1. The minimum base cost is \$1.
- (c) Determine the Schedule B factor using the prescribed value in Table 1.01 as referred to in Table 2.01.
- (d) Determine the Schedule C factor using the prescribed value in Table 2.01A or 2.01B as referred to in Table 2.01.

**2.004 (CONT.)**

- (e) The assessor may allow additional depreciation (Schedule D) on a case-by-case basis and only if the operator provides acceptable evidence to the assessor.
- (f) Calculate the assessment of linear property by multiplying together the values of Schedules A, B, C, and D. The final assessment is rounded to the nearest \$10. The minimum assessment for linear property is \$10.

**TABLE 2.01 CALCULATION PROCESS FOR ELECTRIC POWER SYSTEMS ACCS**

Notes:

- (a) All cost factors (cf) referred to in Table 2.01 are found in Table 2.02 using year built.
- (b) For ACCs beginning with EDS, *n\** equals the quantity of customer hookups as of October 31 of the assessment year.
- (c) For ACCs beginning with ESL10, *n\** equals the number of street lighting poles with one or more davits as of October 31 of the assessment year. Street light poles with more than one davit must report the additional davits as ESL20.
- (d) For ACCs beginning with ESL20, *n\** equals the number of davits not reported as ESL10 as of October 31 of the assessment year.
- (e) For ACCs beginning with EFS, *n\** equals the quantity of customer hookups as of October 31 of the assessment year.
- (f) For ACCs beginning with ET, *n\** equals the length in metres.
- (g) For ACC EDS12 the Schedule D depreciation factor is 0.116.
- (h) For ACC EDS13 the Schedule D depreciation factor is 0.486.
- (i) \*\*For the ACC SST10 and ACCs beginning with GEN, the assessor may allow additional depreciation (Schedule D) only on a case-by-case basis and only if the operator provides acceptable evidence.
- (j) For all other ACCs for electric power systems Schedule D depreciation is 1.000.

**3.000 TELECOMMUNICATIONS SYSTEMS**

**3.001 DEFINITIONS**

No additional definitions are required for section 3.000.

**3.002 DESCRIPTION OF THE RATES FOR ACCS FOUND IN TABLE 3.01**

- (a) ACCs beginning with RT includes all costs for antenna supporting towers, their foundations, grounding, including the antenna mount, ice guards, and support hardware, but exclude antennas and wave guides. The cost of all types of towers, poles, masts, or other structures that support radio antennas are also included.
- (b) The Assessment Year Modifier (AYM) referred to in Table 3.01 or Table 3.04 is found in Table 1.01.
- (c) ACC POPS includes all construction costs for a point of presence without standby power that serves one customer or a single multi-tenant building.
- (d) ACC POPM includes all construction costs for a point of presence with standby power that serves larger installations where more than one building is connected or for the connection of residential service whose included cost is less than \$100,000 in the year built.
- (e) ACC POPO includes all construction costs for all other point of presence sites whose included cost exceeds \$100,000 in the year built.

**3.003 ADDITIONAL DEPRECIATION (SCHEDULE D) FOR ACCS BEGINNING WITH COAX, FIBRC, FIBRT1, FIBRT2, FIBRT3, HKUP, COPR AND DROP**

- (a) For cable distribution undertakings with ACCs beginning with COAX, FIBRC, and HKUP the assessor shall adjust for additional depreciation (Schedule D) by applying the formula and factors found in Table 3.03.
- (b) For telecommunication carriers with ACCs beginning with COPR, DROP, and FIBRT the assessor shall adjust for additional depreciation (Schedule D) by applying the formula and factors found in Table 3.06.
- (c) The depreciation factors prescribed in Schedule D for linear property are exhaustive. No additional depreciation is allowed.

**3.004 PROCESS FOR CALCULATING THE ASSESSMENT OF LINEAR PROPERTY TELECOMMUNICATIONS SYSTEMS**

The assessment of linear property telecommunications systems is calculated by using the following process:

- (a) Locate the ACC determined from section 3.004 in Table 3.01 or Table 3.04.
- (b) Calculate the base cost using the prescribed Schedule A formula, rounded to the nearest \$1. The minimum base cost is \$1.
- (c) Determine the Schedule B factor using the prescribed value in Table 1.01 as referred to in Table 3.01 or Table 3.04.
- (d) Determine the Schedule C factor using the prescribed value in Table 3.01A or Table 3.04A as referred to in table 3.01 or table 3.04. The depreciation factors prescribed in Schedule C for linear property are exhaustive except as specified in Schedule D.
- (e) Determine the Schedule D factor using the prescribed values in Table 3.01 or Table 3.04. The depreciation factors prescribed in Schedule D for linear property are exhaustive. No additional depreciation is allowed.
  - (i) for ACCs starting with HKUP, COAX, COPR and DROP the utilization percentage is the number of actual customer hook-ups divided by potential customer hook-ups times 100.

**3.004 CONT.**

- ii) for ACCs starting with FIBRC, FIBRT1, FIBRT2, AND FIBRT3, the utilization percentage is the number of lit strands divided by owned strands times 100.
- (f) Calculate the assessment of linear property by multiplying together the values of Schedules A, B, C, and D. The final assessment is rounded to the nearest \$10. The minimum assessment for linear property is \$10.

TABLE 3.01 CALCULATION PROCESS FOR CABLE DISTRIBUTION UNDERTAKINGS ACCS

Notes:

(a) All cost factors referred to in Table 3.01 are found in Table 3.02.

**4.000 PIPELINES AND WELLS****4.001 DEFINITIONS**

No additional definitions are required for section 4.000.

**4.002 CHARACTERISTICS AND SPECIFICATIONS**

- (a) For linear property defined in section 284(1)(k)(iii)(A) and (B) of the *Act* where that linear property is licensed by the ERCB and the linear property is contained in the records of the ERCB, the assessment must reflect the characteristics and specifications contained in the records of the ERCB as of October 31 of the assessment year.
- (b) For linear property defined in section 284(1)(k)(iii)(A) and (B) of the *Act* where that linear property is not licensed by the ERCB or the linear property is not contained in the records of the ERCB, the assessment must reflect the characteristics and specifications contained in the RFI as of October 31 of the assessment year.
- (c) For linear property defined in section 284(1)(k)(iii)(C)(D)(E) and (E.1) of the *Act* the assessment must reflect the characteristics and specifications contained in the records of the ERCB as of October 31 of the assessment year.
- (d) For linear property defined in section 284(1)(k)(iii)(C)(D)(E) and (E.1) of the *Act* located within the municipal boundary of the City of Lloydminster, Saskatchewan, the assessment must reflect the characteristics and specifications contained in the RFI as of October 31 of the assessment year.
- (e) For linear property described in 4.002(a), the following sections apply:
  - (i) 4.003(a)
  - (ii) 4.006
  - (iii) 4.010(a)
  - (iv) 4.011(a)
  - (v) 4.012.
- (f) For linear property described in 4.002(b), the following sections apply:
  - (i) 4.003(b)
  - (ii) 4.007
  - (iii) 4.013.
- (g) For linear property described in 4.002(c) or 4.002(d), the following sections apply:
  - (i) 4.003(c)
  - (ii) 4.004
  - (iii) 4.005
  - (iv) 4.008
  - (v) 4.009
  - (vi) 4.010(b)
  - (vii) 4.011(b)
  - (viii) 4.014.

**4.003 CHARACTERISTICS AND SPECIFICATIONS USED TO DETERMINE THE ACC OF LINEAR PROPERTY PIPELINES**

- (a) For linear property described in 4.002(a), the ACC is determined based on the combination of the following characteristics and specifications:
  - (i) pipeline material (see Table 4.01),
  - (ii) outside diameter, and
  - (iii) the maximum operating pressure, as contained in the records of the ERCB. (see Table 4.02)
  
- (b) For linear property described in 4.002(b), the ACC is determined based on the combination of the following characteristics and specifications:
  - (i) pipeline material (see Table 4.01),
  - (ii) outside diameter, and the maximum operating pressure, as contained in the RFI.
  
- (c) For linear property described in 4.002(c) or 4.002(d), the ACC is determined based on the combination of the following characteristics and specifications:
  - (i) pool code,
  - (ii) well status fluid,
  - (iii) well status mode,
  - (iv) well status type,
  - (v) well status structure,
  - (vi) monthly oil (includes bitumen),
  - (vii) monthly gas
  - (viii) monthly condensate volumes, and
  - (ix) surface hole locationas contained in the records of the ERCB or the RFI.

**4.004 PROCESS FOR DETERMINING THE WELL STATUS OF LINEAR PROPERTY DESCRIBED IN 4.002(c) OR 4.002(d)**

The well status of linear property pipelines described in 4.002(c) or 4.002(d) is determined by combining the latest well status fluid, well status mode, well status type and well status structure as contained in the records of the ERCB or the RFI as shown in Table 4.05.

**4.005 PROCESS FOR DETERMINING THE WELL STATUS DESCRIPTION OF LINEAR PROPERTY DESCRIBED IN 4.002(c) OR 4.002(d)**

The process for determining well status description for each well status identified for linear property described in 4.002(c) or 4.002(d) is as follows:

- (1) Locate each well status in column 1 of Table 4.05.
- (2) Determine the sum of oil and condensate production in the 12 months ending October 31 of the assessment year. If production is greater than zero (0), then the well status description is found in column 2 of Table 4.05 and proceed to 4.005(5). If production is equal to zero (0), then proceed to 4.005(3).
- (3) Determine the total gas production in the 12 months ending October 31 of the assessment year. If production is greater than zero (0), then the well status description is found in column 3 of Table 4.05 and proceed to 4.005(5). If production is equal to zero (0), proceed to 4.005(4).
- (4) For all remaining linear property described in 4.002(c) or 4.002(d) the well status description is found in column 4 of Table 4.05.
- (5) For "Gas" and "Drilled and Cased" well status descriptions, if the first four characters of pool code associated with the well status, as contained in the records of the ERCB, or the RFI, are 0158, then the well status description is found in Table 4.06.

#### 4.006 **PROCESS FOR DETERMINING THE ACC OF LINEAR PROPERTY DESCRIBED IN 4.002(a) OR 4.002(b) AND 4.003(a) OR 4.003(b)**

The process for determining the ACC for linear property described in 4.002(a) or 4.002(b) and 4.003(a) or 4.003(b) is as follows:

- (1) Locate the material code contained in the records of the ERCB or the RFI in column 2 of Table 4.01. The Minister's Guidelines Pipe Material is found in column 4 of Table 4.01. If the reported material code cannot be found in column 2 of table 4.01 then the Minister's Guidelines Pipe Material is defaulted to 'S'.
- (2) If the Minister's Guidelines Pipe Material is "S" and the maximum operating pressure is:
  - (A) Greater than or equal to zero (0), then locate the pressure range in column 1 of Table 4.02 that contains the maximum operating pressure as contained in the records of the ERCB or the RFI. The Minister's Guidelines Pressure Code is found in column 2 of Table 4.02,
  - (B) Not reported, then the Minister's Guidelines Pressure Code is P900.
- (3) If the Minister's Guidelines Pipe Material is P, V, A, or F then locate the pipe material in column 1 of Table 4.02A. The ACC is found in column 2 of Table 4.02A.
- (4) If the Minister's Guidelines Pipe Material is S and the pressure code is P150, P300, P400, then locate the pressure code in column 1 of Table 4.02B. The ACC is found in column 2 of Table 4.02B.
- (5) If the Minister's Guidelines Pipe Material is S and the pressure code is P600, then locate the outside diameter in the ranges specified in column 1 of Table 4.02C. The ACC is found in column 2 of Table 4.02C.
- (6) If the Minister's Guidelines Pipe Material is S and the pressure code is P900, then locate the outside diameter in the ranges specified in column 1 of Table 4.02D. The ACC is found in column 2 of Table 4.02D.

#### 4.007 **PROCESS FOR DETERMINING THE $n^*$ OF LINEAR PROPERTY DESCRIBED IN 4.002(a) AND 4.002(b)**

- (1) For linear property described in 4.002(a)  $n^*$  equals the licensed length as contained in the record of the ERCB.
- (2) For linear property described in 4.002(b)  $n^*$  equals the quantity reported in kilometres (km) in the RFI.

#### 4.008 **PROCESS FOR DETERMINING THE ACC OF LINEAR PROPERTY DESCRIBED IN 4.002(c) OR 4.002(d)**

- (a) Determine how many well statuses the linear property has.
- (b) If the linear property has:
  - (i) exactly one well status, locate the well status description determined in 4.005 on Table 4.07 to determine the ACC,
  - (ii) more than one well status description, use Table 4.08. From the well status descriptions of the linear property determined in 4.005, identify the well status description that occurs first in Table 4.08 to determine the ACC.
- (c) If after the process outlined in 4.008(a) and (b), the linear property has an ACC of WL50 (Crude Bitumen) then count the number of linear property surface holes located within the same LSD, section, township, range and meridian that have an ACC of WL50,
  - (i) If the count is greater than or equal to ten, then the ACC for each of the wells is WL60 (Crude Bitumen High Density).
  - (ii) If the count is less than ten, then the ACC for each of the wells remains WL50.

#### 4.009 PROCESS FOR DETERMINING $n^*$ IN TABLE 4.09 FOR LINEAR PROPERTY DESCRIBED IN 4.002(c)

The process for determining  $n^*$  for linear property described in 4.002(c) is as follows:

- (1) For each well status determine the least of:
  - (A) Total depth (field WELL-TOTAL-DEPTH of ERCB General Well File record type 010)
  - (B) Deepest shoe set depth (field SHOE-SET-DEPTH of ERCB General Well File record type 040)

as contained in the records of the ERCB for the well statuses identified in 4.009(1) where the depth does not equal zero (0). If the shoe set depth, total depth and plug depth are all zero (0), then  $n^*$  equals zero (0).
- (2) For each well status determine the least of:
  - (A) The top of all cement plugs (field INTRVL-TOP of ERCB General Well File record type 055 where field PACKER-IND is 1 and field PT-CODE is 51)
  - (B) The top of all bridge plugs with cement (field INTRVL-TOP of ERCB General Well File record type 055 where field PACKER-IND is 1 and field PT-CODE is 53)
  - (C) The top of all bridge plugs without cement (field INTRVL-TOP of ERCB General Well File record type 055 where field PACKER-IND is 1 and field PT-CODE is 55)
  - (D) The top of all hydromite bridge plugs (field INTRVL-TOP of ERCB General Well File record type 055 where field PACKER-IND is 1 and field PT-CODE is 57)

as contained in the records of the ERCB for the well statuses identified in 4.009(1) where the depth does not equal zero (0).

If the well status has no cement plugs or bridge plugs (with or without cement) then the depth for 4.009(2) is zero (0).

- (3) For each well status determine the well status depth. If the depth determined in 4.009(2) for the well status is:
  - (A) Equal to zero (0) then the well status depth is the depth determined in 4.009(1).
  - (B) Greater than zero (0) then the well status depth is:

$$\text{Depth}_{4.009(2)} + ((\text{Depth}_{4.009(1)} - \text{Depth}_{4.009(2)}) * 0.100)$$

- (4)  $n^*$  for the linear property is the largest of the well status depths determined in 4.009(3).

**4.009A PROCESS FOR DETERMINING  $n^*$  IN TABLE 4.09 FOR LINEAR PROPERTY DESCRIBED IN 4.002(d)**

The process for determining  $n^*$  for linear property described in 4.002(d) is as follows:

- (1) For each well status determine the least of:
  - (A) Total depth
  - (B) Deepest shoe set depth
  - (C) Plug back depth

as contained in the RFI for the well statuses identified in 4.009(1) where the depth does not equal zero (0). If the shoe set depth, total depth and plug depth are all zero (0), then  $n^*$  equals zero (0).

- (2) For each well status determine the least of:
  - (A) The top of all cement plugs
  - (B) The top of all bridge plugs with cement
  - (C) The top of all bridge plugs without cement
  - (D) The top of all hydromite bridge plugs

as contained in the RFI for the well statuses identified in 4.009(1) where the depth does not equal zero (0).

If the well status has no cement plugs or bridge plugs (with or without cement) then the depth for 4.009A(2) is zero (0).

- (3) For each well status determine the well status depth. If the depth determined in 4.009A(2) for the well status is:
  - (A) Equal to zero (0) then the well status depth is the depth determined in 4.009A(1).
  - (B) Greater than zero (0) then the well status depth is:

$$\text{Depth}_{4.009A(2)} + ((\text{Depth}_{4.009A(1)} - \text{Depth}_{4.009A(2)}) * 0.100)$$

- (4)  $n^*$  for the linear property is the largest of the well status depths determined in 4.009A(3).

**4.010 CHARACTERISTICS AND SPECIFICATIONS USED FOR DETERMINING ADDITIONAL DEPRECIATION (SCHEDULE D) FOR LINEAR PROPERTY PIPELINES**

- (a) For linear property described in 4.002(a) or 4.002(b), the following specifications and characteristics:

- (i) Pipe status
- (ii) From facility code, and
- (iii) From location

as of October 31 of the assessment year and as contained in the records of the ERCB or the RFI, are used to determine the schedule D factor, if applicable.

- (b) For linear property described in 4.002(c) or 4.002(d), the following specifications and characteristics:

- (i) Monthly oil production volume
- (ii) Monthly gas production volume
- (iii) Monthly condensate volume
- (iv) Monthly injection hours, and
- (v) Monthly production hours

as of October 31 of the assessment year and as contained in the records of the ERCB or the RFI are used to determine the schedule D factor, if applicable.

**4.011 PROCESS FOR DETERMINING ADDITIONAL DEPRECIATION (SCHEDULE D) FOR LINEAR PROPERTY PIPELINES**

- (a) For linear property described in 4.002(a), the specifications and characteristics identified in 4.010(a) are used as described in Table 4.04.
- (b) For linear property described in 4.002(c) or 4.002(d):
  - (i) Calculate the total production for the linear property, including all linear property well statuses, for the twelve months ending October 31 of the assessment year using the formula:  
Total Production = Oil production (m<sup>3</sup>) + Condensate production (m<sup>3</sup>) +  
(Gas production (Tm<sup>3</sup>) ÷ 0.9714)  
\*\*Oil, condensate and gas production are as contained in the records of the ERCB or the RFI. No further conversion is required.
  - (ii) Calculate the total injection and production hours for the linear property, including all linear property well statuses, for the twelve months ending October 31 of the assessment year.
  - (iii) Refer to Table 4.09 to determine the table to be used to find Schedule D depreciation for the ACC determined in section 4.008.

**4.012 PROCESS FOR CALCULATING THE ASSESSMENT OF LINEAR PROPERTY DESCRIBED IN 4.002(a)**

The assessment of linear property pipelines described in 4.002(a) is calculated using the following process:

- (a) Locate the ACC determined from section 4.006 in Table 4.03.
- (b) Calculate the base cost using the prescribed Schedule A formula, rounded to the nearest \$1. The minimum base cost is \$1.
- (c) Determine the Schedule B factor using the prescribed value in Table 1.01 as referred to in Table 4.03.
- (d) Determine the Schedule C factor using the prescribed value in Table 4.03A as referred to in Table 4.03. The depreciation factors prescribed in Schedule C for linear property are exhaustive. No additional depreciation is allowed except as specified in Schedule D.
- (e) Determine the Schedule D factor using the prescribed values in Table 4.03 and Table 4.04. The depreciation factors prescribed in Schedule D for linear property are exhaustive. No additional depreciation is allowed.
- (f) Calculate the assessment of linear property pipelines by multiplying together the values of Schedules A, B, C, and D. The final assessment is rounded to the nearest \$10. The minimum assessment for linear property is \$10.

**4.013 PROCESS FOR CALCULATING THE ASSESSMENT OF LINEAR PROPERTY DESCRIBED IN 4.002(b)**

The assessment of linear property described in 4.002(b) is calculated using the following process:

- (a) Locate the ACC determined from section 4.006 in Table 4.03.
- (b) Calculate the base cost using the prescribed Schedule A formula, rounded to the nearest \$1. The minimum base cost is \$1.
- (c) Determine the Schedule B factor using the prescribed value in Table 1.01 as referred to in Table 4.03.
- (d) Determine the Schedule C factor using the prescribed value in Table 4.03A as referred to in Table 4.03. The depreciation factors prescribed in Schedule C for linear property are exhaustive. No additional depreciation is allowed except as specified in Schedule D.
- (e) Determine the Schedule D factor using the prescribed values in Table 4.03 and Table 4.04. The depreciation factors prescribed in Schedule D for linear property are exhaustive. No additional depreciation is allowed.
- (f) Calculate the assessment of linear property pipelines by multiplying together the values of Schedules A, B, C and D. The final assessment is rounded to the nearest \$10. The minimum assessment for linear property is \$10.

**4.014 PROCESS FOR CALCULATING THE ASSESSMENT OF LINEAR PROPERTY DESCRIBED IN 4.002(c) OR 4.002(d)**

The assessment of linear property pipelines described in 4.002(c) or 4.002(d) is calculated using the following process:

- (a) Locate the ACC determined from section 4.008 in Table 4.09.
- (b) Calculate base cost using the prescribed Schedule A formula, rounded to the nearest \$1. The minimum base cost is \$1.
- (c) Determine the Schedule B factor using the prescribed value in Table 1.01 as referred to in Table 4.09.
- (d) Determine the Schedule C factor using the prescribed value in Table 4.09A as referred to in Table 4.09. The depreciation factors prescribed in Schedule C for linear property are exhaustive except as specified in Schedule D.
- (e) Determine the Schedule D factor using the prescribed values in Table 4.09 as prescribed. The depreciation factors prescribed in Schedule D for linear property are exhaustive. No additional depreciation is allowed.
- (f) Calculate the assessment of linear property pipelines by multiplying together the values of Schedules A, B, C and D. The final assessment is rounded to the nearest \$10. The minimum assessment for linear property is \$10.

**TABLE 4.01 PIPE MATERIAL EQUIVALENCY CHART FOR LINEAR PROPERTY DESCRIBED IN 4.002(a) OR 4.002(b)**

The following chart will be used to translate the ERCB or RFI pipe material code to the Minister's Guidelines pipe material code.

ERCB or RFI Pipe Material (col1)	Code (col2)	Minister's Guidelines Pipe Material (col3)	Code (col4)
Aluminum	A	Aluminum	A
Poly Butylenes	B	Polyethylene	P
Cellulose Acetate	C	Polyethylene	P
Fibreglass	F	Fibreglass	F
Composite	G	Steel	S
Asbestos Cement	H	Polyethylene	P
Cast Iron	N	Steel	S
Polyethylene	P	Polyethylene	P
Non Certified	R	Polyethylene	P
Steel	S	Steel	S
Unknown	U	Polyethylene	P
Polyvinyl chloride	V	Polyvinyl chloride	V

**TABLE 4.02 PROCESS FOR DETERMINING THE LINEAR PROPERTY UNIT EQUIVALENCY FOR MAXIMUM OPERATING PRESSURE OF LINEAR PROPERTY DESCRIBED IN 4.002(a) AND 4.002(b) FOR MATERIAL THAT EQUALS S**

ERCB or RFI Maximum Operating Pressure (Col1)	Minister's Guidelines Pressure Code (Col2)
0–1899 kPa	P150
1900–4999 kPa	P300
5000–6629 kPa	P400
6630–9939 kPa	P600
9940 or greater kPa	P900

Greater than 323.9 mm	PL141

TABLE 4.03 CALCULATION PROCESS FOR LINEAR PROPERTY DESCRIBED IN 4.002(a) OR 4.002(b)

For ACC beginning with PL,  $x$  equals the outside diameter of the pipe in millimetres (mm).  
 $n^*$  equals the length of pipe in kilometres (km) as contained in the records of the ERCB, or, for pipeline not found in the records at the ERCB, as contained in the report requested by the assessor (RFI).

For ACC beginning with GDS  $n^*$  equals the number of customer hookups

ACC	ACC Description	Schedule

Schedule D is 1.000 unless Code D or Code CFBS applies.

Code	Description	Schedule D Factor
<b>D</b>	Pipeline that has a discontinued status as contained in the records of the ERCB or the RFI.	0.100
<b>CFBS</b>	Pipeline with an operational status and a diameter greater than 246.2 mm as contained in the records of the ERCB that is within the boundaries of Canadian Forces Base Suffield as found on Plan 9411999, Block A only.	0.950

**TABLE 4.05 DETERMINING WELL STATUS DESCRIPTIONS FOR LINEAR PROPERTY DESCRIBED IN 4.002(c) OR 4.002(d)**

**Column 1:** Well Status is determined by combining well status fluid, well status mode, well status type and well status structure as contained in the records of the ERCB or the RFI.

**Column 2:** Provides the well status description where the sum of oil and condensate production in the 12 months ending October 31 of the assessment year is greater than 0.

**Column 3:** Provides the well status description where the sum of oil and condensate production is equal to 0 in the 12 months prior to October 31 of the assessment year and gas production in the 12 months ending October 31 of the assessment year is greater than 0.

**Column 4:** Provides the well status description where the sum of oil and condensate production and gas production in the 12 months ending October 31 of the assessment year is equal to 0.

Crude oil pumping	WL20
Gas	WL30
Injection/Disposal/Storage	WL40
Crude Bitumen	WL50
Crude Bitumen High Density	WL60
Water	WL70
Drilled and Cased	WL120
Pool Code 0158	WL230
Pool Code 0158-Drilled and Cased	WL250

**TABLE 4.08 DETERMINING THE ACC FOR LINEAR PROPERTY DESCRIBED IN 4.002(c) OR 4.002(d) WHERE THERE IS MORE THAN ONE WELL STATUS DESCRIPTION**

<b>Well Status description</b>	<b>ACC</b>
Crude Bitumen	WL50
Crude Bitumen High Density	WL60
Crude Oil Pumping	WL90
Crude Oil Flowing	WL80
Gas	WL100
Pool Code 0158	WL240
Injection/Disposal/Storage	WL110
Drilled and Cased	WL120
Pool Code 0158-Drilled and Cased	WL250
Water	WL70

TABLE 4.09 CALCULATION PROCESS FOR LINEAR PROPERTY DESCRIBED IN 4.002(c) OR 4.002(d)

The process for determining  $n^*$  in Table 4.09 is described in section 4.009.

For ACCs beginning WL  $n^*$  equals the depth in metres (m).

For ACC WL10, WL20, WL30, WL40, WL50, WL60, WL80, WL90, WL100, WL110, WL120, WL230, WL240, WL250 if  $(n^*-304)$  is less than zero (0) then  $(n^*-304)$  equals zero (0).

ACC	ACC Description	Schedule			
		A	B	C	D
WL10	Crude oil flow well where the licence has one unique well identifier	$72\,726 + ((n^*-304) \times 122.01)$	Table 1.01	Table 4.09A	Table 4.10
WL20	Crude oil pump well where the licence has one unique well identifier	$104\,748 + ((n^*-304) \times 142.74)$	Table 1.01	Table 4.09A	Table 4.10
WL30	Gas well where the licence has one unique well identifier	$58\,094 + ((n^*-304) \times 132.91)$	Table 1.01	Table 4.09A	Table 4.10
WL40	Injection/Disposal/Storage where the licence has one unique well identifier	$70\,008 + ((n^*-304) \times 149.98)$	Table 1.01	Table 4.09A	Table 4.12
WL50	Crude bitumen	$133\,267 + ((n^*-304) \times 207.54)$	Table 1.01	Table 4.09A	Table 4.10
WL60	Crude bitumen—high density	$127\,751 + ((n^*-304) \times 207.54)$	Table 1.01	Table 4.09A	Table 4.10
WL70	Water Source / Supply	22 761	Table 1.01	Table 4.09A	Table 4.13
WL80	Crude Oil Flow where the licence has more than one unique well identifier	$89\,220 + ((n^*-304) \times 133.82)$	Table 1.01	Table 4.09A	Table 4.10
WL90	Crude Oil Pump where the licence has more than one unique well identifier	$123\,687 + ((n^*-304) \times 197.85)$	Table 1.01	Table 4.09A	Table 4.10
WL100	Gas where the licence has more than one unique well identifier	$79\,243 + ((n^*-304) \times 135.71)$	Table 1.01	Table 4.09A	Table 4.10
WL110	Injection/Disposal/ where the licence has more than one unique well identifier	$101\,995 + ((n^*-304) \times 210.24)$	Table 1.01	Table 4.09A	Table 4.12
WL120	Drilled and Cased	$9\,863 + ((n^*-304) \times 132.91)$	Table 1.01	Table 4.09A	0.100
WL230	Pool Code 0158 where the licence has one unique well identifier	$11\,350 + (n^* \times 97.04)$	Table 1.01	Table 4.09A	Table 4.11
WL240	Pool Code 0158 where the licence has more than one unique well identifier	$11\,350 + (n^* \times 112.13)$	Table 1.01	Table 4.09A	Table 4.11
WL250	Pool Code 0158-Drilled and Cased	$8\,572 + (n^* \times 97.04)$	Table 1.01	Table 4.09A	0.100

TABLE 4.09A SCHEDULE C DEPRECIATION FACTORS FOR WELL PROPERTIES

2007 Schedule C Factor	2008 Schedule C Factor	2009 Schedule C Factor
0.670	0.670	0.670

TABLE 4.10 SCHEDULE D FACTORS FOR ACCS WL10, WL20, WL30, WL50, WL60, WL80, WL90, WL100

The process for calculating total well production is defined in 4.011(b).

Code	Total Production	Schedule D Factor
1A	Greater than 477	1.000
1B	Greater than 397 and less than or equal to 477	0.860
1C	Greater than 318 and less than or equal to 397	0.720
1D	Greater than 238 and less than or equal to 318	0.570
1E	Greater than 159 and less than or equal to 238	0.430
1F	Greater than 79 and less than or equal to 159	0.290
1G	Greater than 0 and less than or equal to 79	0.150
1H	0	0.100

TABLE 4.11 SCHEDULE D FACTORS FOR ACCS WL230 AND WL240

The process for calculating total well production is defined in 4.011(b).

Code	Total Production	Schedule D Factor
2A	Greater than 183	1.000
2B	Greater than 142 and less than or equal to 183	0.860
2C	Greater than 86 and less than or equal to 142	0.620
2D	Greater than 29 and less than or equal to 86	0.390
2E	Greater than 0 and less than or equal to 29	0.150
2F	0	0.100

TABLE 4.12 SCHEDULE D FACTORS FOR ACCS WL40 AND WL110

The process for calculating total injection hours is defined in 4.011(b)

Code	Injection Hours	Schedule D Factor
3A	Greater than 720 hrs	1.000
3B	Greater than 599 and less than or equal to 720 hrs	0.860
3C	Greater than 359 and less than or equal to 599 hrs	0.720
3D	Greater than 139 and less than or equal to 359 hrs	0.490
3E	Greater than 0 and less than or equal to 139 hrs	0.150
3F	0	0.100

**TABLE 4.13 SCHEDULE D FACTORS FOR ACC WL70**

The process for calculating total production hours is defined in 4.011(b).

<b>Code</b>	<b>Production Hours</b>	<b>Schedule D Factor</b>
<b>4A</b>	Greater than 720 hrs	1.000
<b>4B</b>	Greater than 599 and less than or equal to 720 hrs	0.860
<b>4C</b>	Greater than 359 and less than or equal to 599 hrs	0.720
<b>4D</b>	Greater than 139 and less than or equal to 359 hrs	0.490
<b>4E</b>	Greater than 0 and less than or equal to 139 hrs	0.150
<b>4F</b>	0	0.100
